

STONEBRIDGE

PRODUCT CARE & MAINTENANCE

Designed and manufactured from forged steel, the Stonebridge range of ironmongery in flat black and satin steel is extremely durable and robust. All Stonebridge products have been finished using a unique ARMOR-COAT® process to provide maximum corrosion resistance - achieving BS EN 1670:2007 Grade 5 in independent testing. All products have also been designed with UV protection, meaning the flat black or satin steel finish will not fade in sunlight.

To ensure maximum product longevity and to maintain the products original flat black or satin steel finish, we recommend the occasional clean with warm soapy water and buff dry with a soft cloth. For external applications, we recommend this is completed every 6 months.

Where Stonebridge products have been installed within 15 minutes from the coast line, we recommend the cleaning process should be undertaken more frequently. This will minimise any potential corrosive salt deposits on the surface.

DO NOT USE SOLVENT CLEANERS OR HOUSEHOLD POLISHES WHEN CLEANING STONEBRIDGE IRONMONGERY AS THIS WILL CAUSE IRREVERSIBLE DAMAGE TO THE SURFACE AND MAY RESULT IN DISCOLOURATION OF THE PRODUCT
