

A GUIDE TO DOOR HANDLES

LATCH

Available on rose and backplate, latch door handles and door knobs are typically used on internal passage doors throughout the home. For such applications, this handle should be installed with a tubular latch.

BATHROOM

Used in bathrooms and en suites, a bathroom door handle allows locking from only one side of the door. Designed with an integrated thumbturn, our range of bathroom door handles also features a coin release to allow doors to be opened in cases of emergency. To be installed with a bathroom mortice lock.

LOCK

To increase security throughout the home, locking door handles are a good choice. Featuring a standard key profile, lock door handles should be installed with a sash lock and operated with a skeleton key. If used in external applications, ensure your chosen handle is corrosion resistant to protect against the elements.

EURO LOCK

Designed with a euro profile, euro lock door handles are typically used on external entrance doors which required enhanced security. This handle type should be installed with a euro sash lock and euro cylinder.
